

## SPRINT-4

<b>Team ID</b>	PNT2022TMID17235
<b>Project Name</b>	Personal Assistance for Seniors Who Are Self Reliant

### TASK:-

To create a Web UI, make the user interact with the software.

### DESCRIPTION: -

- ❖ We have used the IoT **Watson platform** for the creation of IoT device.
- ❖ The web application is built using **Node-RED** for collecting the medicine details from the users.
- ❖ We have used the **cloudant DB** for storing the collected data.
- ❖ The web application will send the medicine details to the created IoT device.
- ❖ The IoT device on receiving the details, it makes use of TTS to remind the user about the medicine.
- ❖ By using **TTS** (Text to Speech) service from the IBM platform, the medicinal information will be notified to the users in the form of voice commands.

Following are the screenshots that demonstrate the Web UI where user interact with the software.

### 1)User Sign Up &Login:

The screenshot shows a web browser window with the URL <https://node-red-downb-2022-10-26.eu-gb.mybluemix.net/vu/WU7hocketid=C3K09UYeqpLwHESMAA8z>. The page has a purple header with a 'Home' button. The main content area contains two forms: 'Registration' and 'Login'. Both forms have fields for 'USERNAME' (pre-filled with 'meena') and 'PASSWORD' (pre-filled with '\*\*\*'). Below each form are 'SUBMIT' and 'CANCEL' buttons.

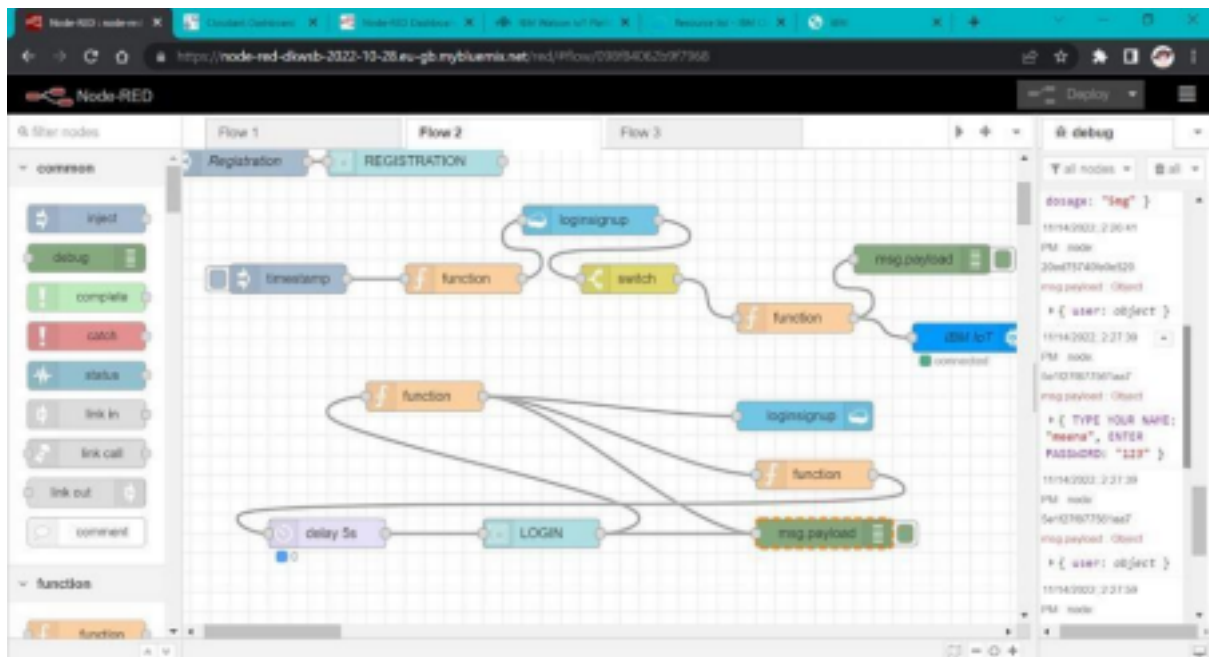

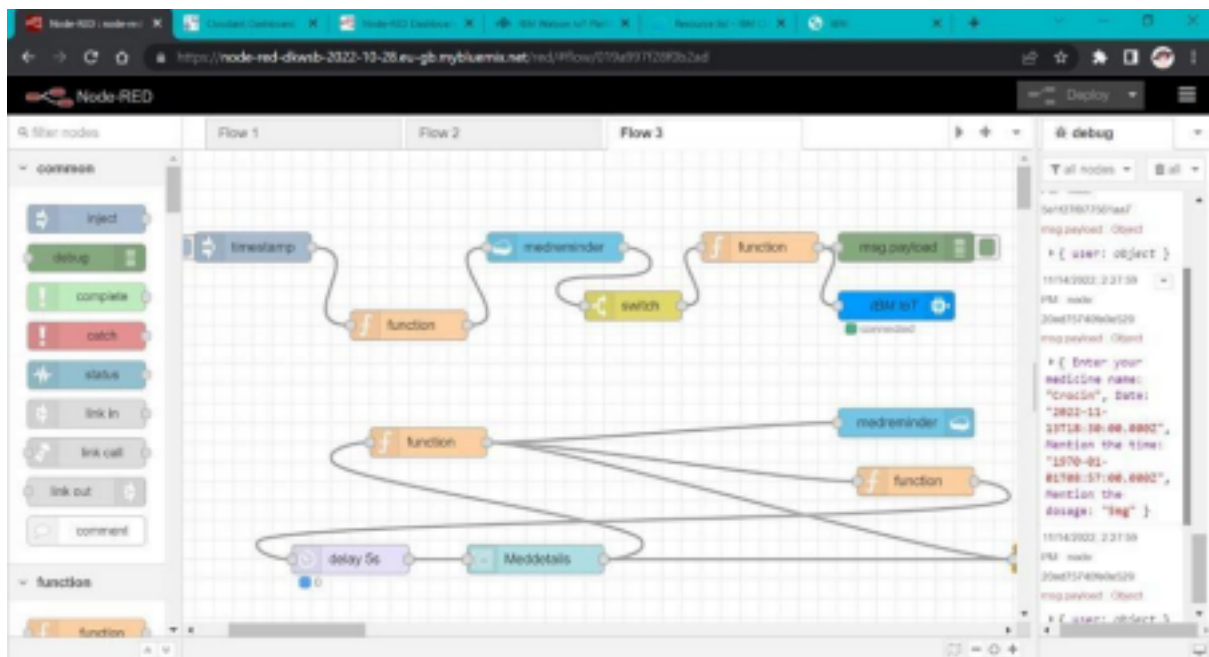

- ❖ The user will first signup with username & password .
- ❖ Then using credentials, the user can login into the app.

## 2)User- Medicine Details Form:

The screenshot shows the same web browser window as before, but the page has a purple header with a 'Medicine' button. The main content area contains a 'Medicine' form. The form has a title 'Meddetails' and a 'MEDICINE' field (pre-filled with 'Crocin'). Below this are three fields: 'DATE' (pre-filled with '14-11-2022'), 'TIME' (pre-filled with '02:28 PM'), and 'DOSAGE' (pre-filled with '5mg'). Below the form are 'SUBMIT' and 'CANCEL' buttons.

- ❖ Here, the user will be able to set the medicine alarm with the medicine name, and the medicine dosage with date & time.

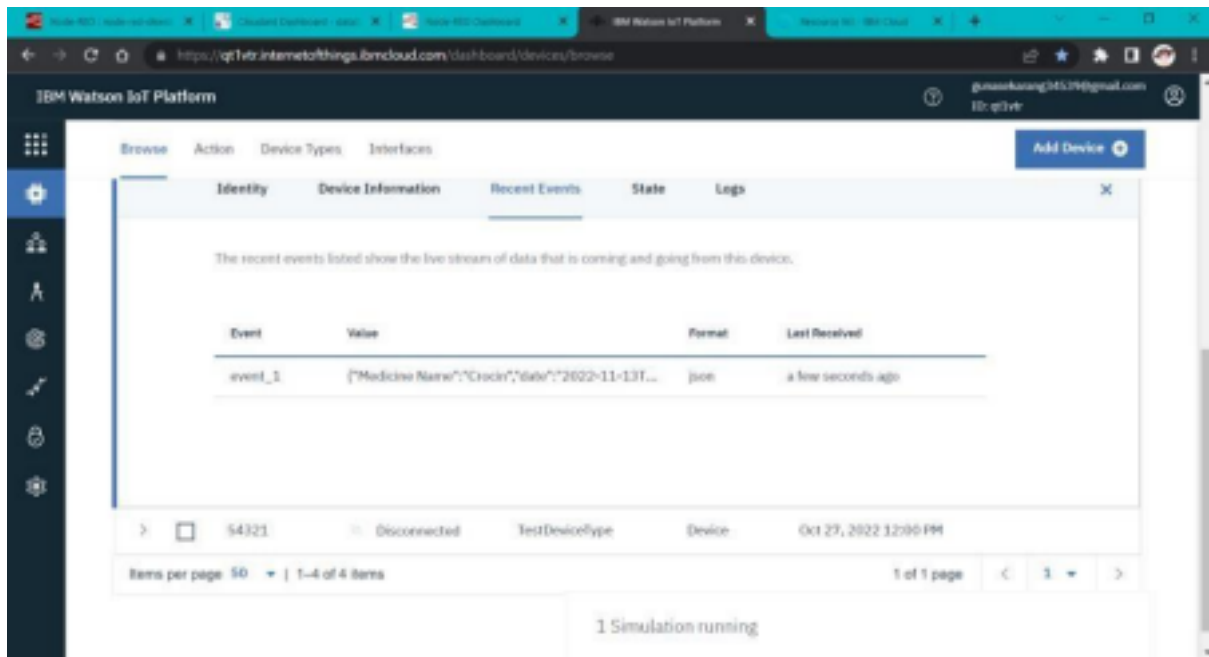

## 3) Node red Workflow:

❖ Using NodeRed flow editor, all the workflow of our web app was designed .

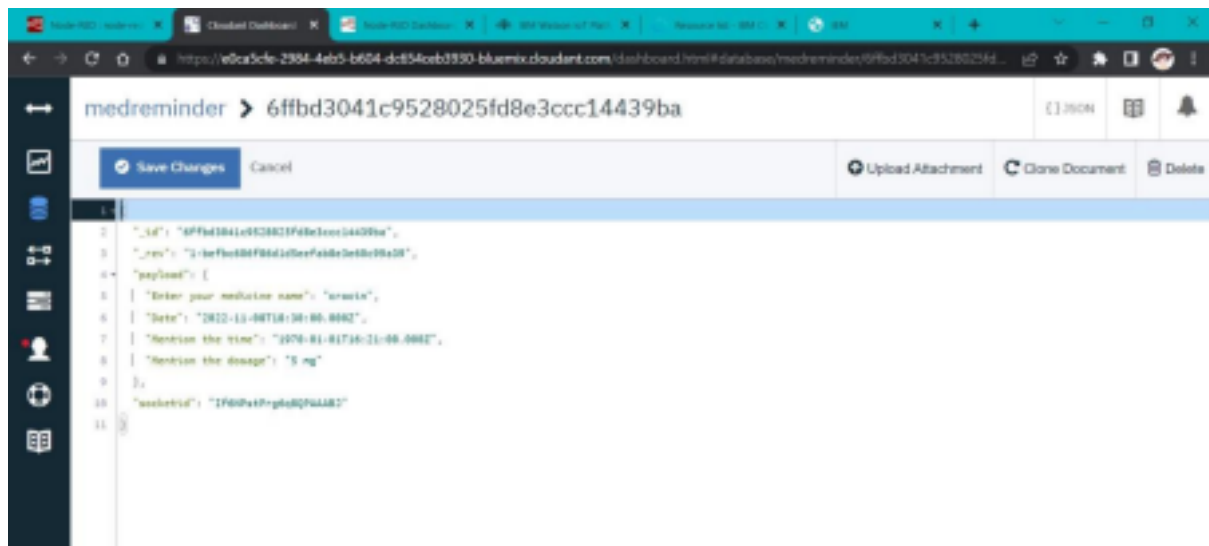

❖ The above screenshots are the Node Red- flow of the login/signup page and home screen of the web app.

#### 4)IBM IOT Device:

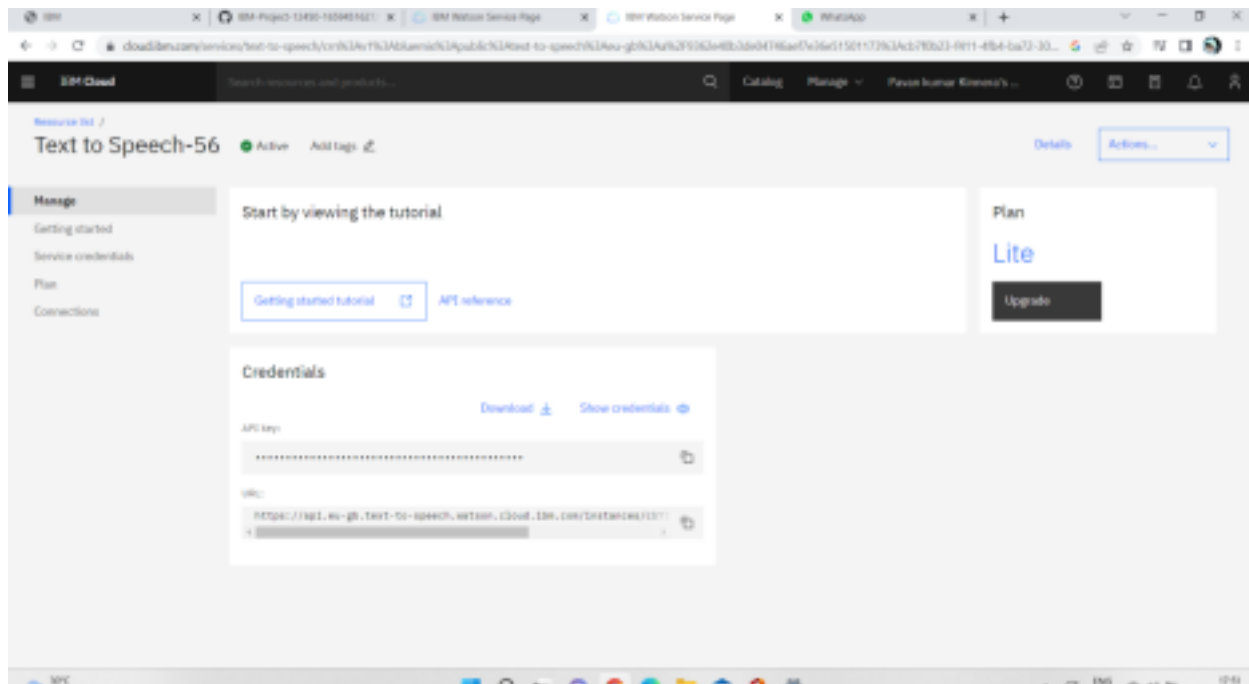

- ❖ The user details are fetched by IoT device named as “Med Reminder” which is created through IBM Watson

## Platform. 5) CLOUDANT-DB:

- ❖ All the medicine details from the user are stored in IBM Cloudant Database in a JSON Format under the Med Reminder database.

## 6) TTS Service:

- ❖ IBM TTS service is used to notify the user's medicine name and dosage via voice Commands

## 7)PYTHON FILE -TTS SERVICE:

```

ibm tts.py - C:\Users\Haritha Sharitha\Desktop\Nalyathiran\ibm tts.py (3.9.8)
File Edit Format Run Options Window Help
from ibm_watson import TextToSpeechV1
from ibm_cloud_sdk_core.authenticators import IAMAuthenticator
from playsound import playsound
authenticator = IAMAuthenticator('97f228C6Ec0YbfJrxCB7YW690uPadxJOjbuA0DBK8xFh')
text_to_speech = TextToSpeechV1(
    authenticator=authenticator
)

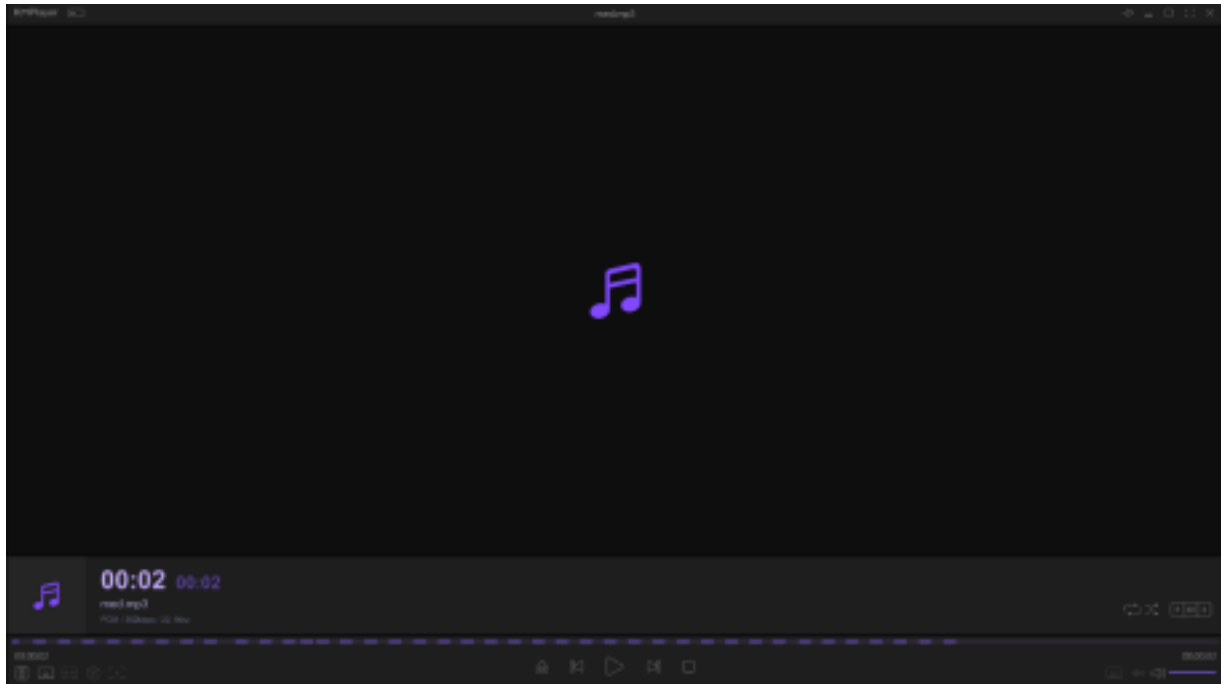

text_to_speech.set_service_url('https://api.eu-gb.text-to-speech.watson.cloud.ibm.com/instances/1234567890')

with open('med.mp3', 'wb') as audio_file:
    audio_file.write(
        text_to_speech.synthesize(
            'Take Crocin 50 mg Now',
            voice='en-US_AllisonV3Voice',
            accept='audio/wav'
        ).get_result().content
    )
print("playing")
playsound('med.mp3')

```

- ❖ This python file converts the text to speech using IBM TTS service .Using this ,Web applications make an alert to the user via voice commands.

## Voice Command TTS Service:

- ❖ Above screenshot contain the voice command when user get notification about intaking of medicine which is given by the user via web application

## RESULT:

Thus, By the end of the sprint-4, the Web UI where user interact with the software is successfully created and tested successfully.
